## Evening Brief

Date: Friday August 3<sup>rd</sup>, 2018

---

### Weather Summary

**\*\*\* High Risk for Gusty Winds/Low RH on Sat for much of Nevada and southwest/western Utah \*\*\***

Isolated, generally wet thunderstorms will develop over the higher elevations of southeast/eastern Utah on Saturday.

A quick shot of moisture moves through southwest/south central Idaho overnight Saturday/Sunday producing isolated generally dry thunderstorms. Hot and dry weather returns for next week.

**Fuels and Fire Behavior advisory has been issued for [Northern Great Basin](#)**

### Fuels/Fire Potential

A Fuel/Fire Behavior advisory has been issued for North/West Nevada into Idaho and Northwest Utah. This advisory can be found here:

<https://gacc.nifc.gov/gbcc/fuels.php>

ERC's are mainly in the 80th - 97th percentile across Northern parts of NV, northern 2/3 of UT and ID, where many areas are approaching record highs for the time of year. Wyoming ERC's are also steadily rising above the 70th - 80th percentiles. Sagebrush Live Fuel Moisture levels across most areas are near early August normal, and grasses are cured in just about all areas, except the highest elevations above 6500 ft. in Idaho and Western Wyoming.

ERC's are still near or below the 50th percentile across the southern third of Nevada, Utah, into the AZ Strip, but even there, drier pockets are beginning to emerge, along with an occasional lightning holdover.
